IN SEARCH OF THE PERFECT BODY

By E.J. Radford

What's your fantasy? A face free of wrinkles, aannerose mouth, eyes that are opened wide, a nose that is smooth, and firm. But modern medicine has revolutionized the way we look at beauty. Today, we can have our beauty - and more. Today, we can have our Princess beauty.

Face Lifts

The Face Lift - a revolution in plastic surgery. No longer is it necessary to undergo the risks and complications of surgery to achieve a youthful appearance. Today, plastic surgeons can achieve similar results with non-surgical procedures, such as injections of Botox or collagen. These treatments are safe and effective, and can be done in a single visit.

Botox injections work by blocking the transmission of nerve impulses to the muscles, causing them to relax. This results in smoother facial lines and a more youthful appearance. Collagen injections work by filling in wrinkles and fine lines, providing a smooth and youthful appearance.

Full Face Lift - $2300

Otoplasty

Otoplasty is a procedure to correct the ears, which are often the first to show signs of aging. Otoplasty can be done to reduce the size of the ears, correct the position of the ears, or both. The procedure is usually done under local anesthesia, and takes about one to two hours. The cost of otoplasty varies depending on the surgeon and the location of the surgery.

Tummy Tuck

A tummy tuck, or abdominoplasty, is a procedure to remove excess skin and fat from the abdomen. It is often done after weight loss, or to improve the appearance of the abdomen. The procedure is usually done under general anesthesia, and takes about three to four hours. The cost of a tummy tuck varies depending on the surgeon and the location of the surgery.

Breast Augmentation

Breast augmentation is a procedure to increase the size of the breasts. It is often done for cosmetic reasons, or to improve self-esteem. The procedure is usually done under general anesthesia, and takes about one to two hours. The cost of breast augmentation varies depending on the surgeon and the location of the surgery.

Liposuction

Liposuction is a procedure to remove fat from specific areas of the body. It is often done to improve the appearance of the body, or to improve self-esteem. The procedure is usually done under general anesthesia, and takes about one to two hours. The cost of liposuction varies depending on the surgeon and the location of the surgery.
