Non-Surgical Vision Correction FOR NEARSIGHTEDNESS

There is now a non-surgical treatment for long-lasting correction of nearsightedness (myopia) and astigmatism that is quick, less costly, and

This vision-correcting procedure was first utilized as a method of improving vision in the early '60s but now vision can often be restored with an accelerated program, in a matter of weeks.

Orthokeratology is designed to quickly reduce the patient's myopic condition and to improve vision with a succession of specially fitted therapeutic contact lenses which gently reshape the curvature of the cornea. Advanced techniques and new technology in specialized contact lenses have revolutionized eye care in the field of vision restoration.

Special stabilizing contact lenses are also available to prevent or retard e gradual increase of nearsightedness.

Dr. Michael Satterlee is highly qualified in this procedure, and holds a fellowship certificate from the laternational Orthokeratology section of the National Eye Research Foundation, with over 25 years of orthokeratology experience. His practice is devoted to contact lenses and corrective vision care.
